OTHER SURFACE DESIGNS

AIR-WOLF Disinfectant and soap dispenser
Housing made of brushed stainless steel, Art. 28-801

Art. 28-801

INSTALLATION ADVICE

We recommend installing soap dispensers directly above the wash-basin or the shelf space. This way dripping liquid soap won't cause a slipping hazard on the floor.

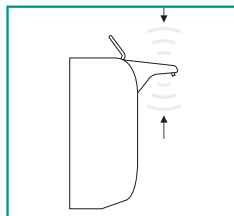

ACCESSORIES:

Drip tray, Art. 37-326: This tray avoids liquid from dripping onto the floor, eliminating the risk of slipping or nucleation.

Angle plate, Art. 37-328 (for installation on the right-hand side), 37-327 (for installation in the left-hand side): You can install the plate parallelly to the wall. This is recommended in narrow hallways or in confined spaces. Another possibility is the side installation at the cupboard or in a niche.

RECOMMENDED SOAPS AND DISINFECTANTS

You can find suitable soaps and disinfectants in our current catalogue with currently valid prices or you can visit our website www.air-wolf.de

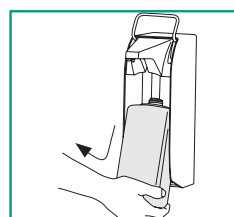

Dual sensor: Alternative pumping mode triggered by placing one hand in the lower sensor range and the other in the upper sensor range.

Additional operating lever for mechanical operation in case of an interference.

Lockable enclosure

Removable inner container
